WEB BASED INTEGRATED CUSTOMER INTERFACE FOR INVOICE REPORTING

ABSTRACT OF THE DISCLOSURE

5   A Web-based invoice viewing system and method for
enabling a customer to generate invoices relating to
various network services provided to the customer by an
enterprise. A Web enabled invoice viewing system
provides billing and invoice information to remote
10   customers having a workstation with a Web browser and an
Internet access. A graphical user interface system at
the customer workstation presents a list of invoice
documents organized into products and date ranges
applicable to the customer for the customer to select and
15   view. Various displays presented at the customer
workstation may be printed, faxed, or queued for batch
printing at the enterprise remotely. The customer is
enabled to view dynamically summed results of numerical
figures displayed on the invoice documents by
20   highlighting the numbers in the document directly on the
display.
